## POOR ROSIE WAS BOILING—AND LOOK WHERE IT LED!

A boil on the eyelid of Marilyn Rose, a secretary at Lederle, helped the company to start on the research road that led to Minocin, its new antibiotic. The boil—which resulted in 67 additional boils as well as passing the infection to her husband—had resisted therapy. The hard-to-combat microbe was named *Staph Rose*, and a culture was taken of the boil. Some 7 million research dollars later, the new antibiotic was unveiled.
